

IN THE CLAIMS:

Please amend the claims as set forth below:

1-7. (Cancelled)

8. (Currently Amended) A method of encapsulating Ethernet frames onto a Very high speed Digital Subscriber Line (VDSL) facility, said method comprising ~~the steps of~~:

receiving Ethernet frames from an Ethernet source;
storing said Ethernet frames for subsequent forwarding;
encapsulating said previously stored Ethernet frames within VDSL frames,
wherein each Ethernet frame is encapsulated entirely within a VDSL
frame; and
transmitting said VDSL frames over said VDSL facility.

9. (Original) The method according to claim 8, wherein said Ethernet source comprises a 10BaseT Ethernet source.

10. (Currently Amended) A method of extracting Ethernet frames from a Very high speed Digital Subscriber Line (VDSL) facility, said method comprising ~~the steps of~~:

receiving VDSL frames from said VDSL facility, wherein every a given Ethernet
frame is encapsulated entirely within a VDSL frame;
extracting ~~entire~~ Ethernet frames from the VDSL frames received;
storing said Ethernet frames for subsequent forwarding; and
forwarding said Ethernet frames to an Ethernet source.

11. (Original) The method according to claim 10, wherein said Ethernet source
comprises a 10BaseT Ethernet source.

12-29. (Cancelled)

30. (New) The method as recited in claim 8 wherein the Ethernet source comprises a 100BaseT Ethernet source.
31. (New) The method as recited in claim 8 wherein the encapsulating comprises inserting a length field prior to the Ethernet frame.
32. (New) The method as recited in claim 31 wherein the encapsulating further comprises inserting a preamble prior to the length field.
33. (New) The method as recited in claim 32 wherein the preamble comprises a Barker code.
34. (New) The method as recited in claim 10 wherein the Ethernet source comprises a 100BaseT Ethernet source.
35. (New) The method as recited in claim 10 wherein the encapsulating comprises inserting a length field prior to the Ethernet frame.
36. (New) The method as recited in claim 35 wherein the encapsulating further comprises inserting a preamble prior to the length field.
37. (New) The method as recited in claim 36 wherein the preamble comprises a Barker code.
38. (New) A method comprising:
 - receiving an Ethernet frame from an Ethernet source;
 - encapsulating the Ethernet frame within a very high speed digital subscriber line (VDSL) frame; and
 - transmitting the VDSL frame over a VDSL facility.
39. (New) The method as recited in claim 38 further comprising:

receiving a second VDSL frame over the VDSL facility;
extracting an Ethernet frame from the VDSL frame; and
transmitting the Ethernet from to the Ethernet source.

40. (New) The method as recited in claim 38 wherein the Ethernet source comprises a 100BaseT Ethernet source.
41. (New) The method as recited in claim 38 wherein the Ethernet source comprises a 10BaseT Ethernet source.
42. (New) The method as recited in claim 38 wherein the encapsulating comprises inserting a length field prior to the Ethernet frame.
43. (New) The method as recited in claim 42 wherein the encapsulating further comprises inserting a preamble prior to the length field.
44. (New) The method as recited in claim 43 wherein the preamble comprises a plurality of bytes exhibiting high autocorrelation properties.
45. (New) The method as recited in claim 43 wherein the preamble comprises a Barker code.
46. (New) The method as recited in claim 43 wherein the VDSL frame excludes an Ethernet preamble that preceded the Ethernet frame on an Ethernet medium.
47. (New) The method as recited in claim 46 where the VDSL frame further excludes an Ethernet start of frame symbol that preceded the Ethernet frame on an Ethernet medium.
